Sand burrs	X	X		
Mixed use on grass or dirt	X	X		

\* Success varies depending on the surface on which your dog is walking or running. Boots will show wear; the material used, while durable, are still fabrics. The more abrasive the surface, the faster the boot will show wear. Wear includes tears, holes, etc. and we can not accept returns in this condition. We've found that using "Shoe Goo" to repair holes or tears works well and gives your boots a longer life.

Unfortunately, there isn't a perfect solution for dogs that drag their feet. - we haven't found a material that will stand up to dragging and still be comfortable for the dog. Some customers use the Rugged boots and then apply Shoe Goo as wear appears.

Exposure to chlorine will cause the dog boots to deteriorate quickly and are not suitable for use in chlorinated situations.
